

In order to link with your source code with the external ASM files, please follow the next steps:

- 1) Right Click on your Project in the “Solution Explorer” and select “Build Customizations...”

- 2) Tick the “masm” box and OK

- 3) If the “Source Files” entry in the Solution Explorer (right-click) select “Add --> Existing item” and select the specific .ASM files for your application (32-bit or 64-bit assembly files)
- 4) You are now able to insert protection macros in your application
